

# Aspiravi – Renewable energy Project Manager

## **A project manager for our renewable energy projects in France (and Spain)**

As project manager International you will be responsible for construction and early operational phase of our renewable energy projects in France (and Spain)

### **During the Construction Phase**

- Provide support during EPC contract negotiations.
- Analyse engineering documentation provided by the owner's engineering and contractors.
- Manage the EPC contract throughout the construction period.
- Monitor the contractor's performance and intervene when necessary.
- Manage and track the construction project budget.
- Coordinate all required project modifications with the Owner's Engineer.

### **During the Operational Phase**

- Monitor key technical and operational indicators of the projects.
- Compare performance figures, analyse production and incident data, and prepare improvement proposals.
- Manage O&M contracts, ensuring full compliance with contractual obligations by both the SPV and project counterparties.

## Your profile

- Bachelor or masterdiploma in electrical/electromechanical engineering (2 years of experience)
- French native speaking and a high level of English
- You have preferably already experience in drive projects with different stakeholders, preferably in renewable energy
- Training on the job is foreseen
- A permanent position, based in France.
- You will receive a contract as "cadre" with an attractive remuneration, company car and other benefits (like lunch vouchers, company phone, homeworking)
- We work 35h/week (on a full time basis), so you will be entitled for 25 legal days of holiday per year
- And off course a very nice team, a good spirit and a drive to build success.
